

# BEFORE DEPARTURE...

## Prevailing weather conditions and the weather forecast

Assess the wind conditions, the state of the sea and visibility. Are your boat's design class, size and on-board equipment, together with the skills of the helmsman and crew, sufficient for the waterways which you intend to use?

## Loading

Do not overload the boat. Distribute the load evenly, and place heavy objects as low as possible, because placing them too high will reduce the boat's stability.

## Passengers

Ensure that life jackets or vests are available for everyone on board. Before departure, agree on what duties each person will be responsible for during the trip.

## Fuel

Check that there is enough fuel on board, including sufficient reserve to cope with bad weather and any unforeseen circumstances.

## Engine and equipment

Check that the steering, electrical devices and battery all function properly and are in good condition. In addition, check the seaworthiness of the boat: ensure that there are no fuel or water leaks, and that there is adequate safety equipment on board, etc. Check that the level of bilge water is minimal.

## Ventilation

Ensure that the fuel space is ventilated to minimise the risk of fire.

## On-board equipment is well secured

Make sure all articles are properly stowed to remain in place in the event of heavy seas and high winds.

## Sea charts

Unless you are thoroughly familiar with the route, ensure that you have sea charts covering a sufficiently wide area.

## Departure manoeuvres

Agree with the crew on who is to be responsible for casting off each rope, etc. During departure and arrival, ensure that mooring or other lines do not get entangled in the propeller. Attach the line for the dead-man's grip to yourself as soon as you have cast off the mooring rope.

## ACTIVE FAMILY

### PIONER 13

10 HK/7.5

5

393 cm x 155 cm / 148 kg

# PIONER - EASY BOATING

Pioner's vision is "Easy boating". We want Pioner owners to experience that using our boat range is safe, practical and easy. Pioner boats ethos is to provide you with all of the following advantages.

**SOLID**  
A Pioner boat can take rough treatment, are userfriendly, need little or no maintenance and has a long life - these qualities has made Pioner boats popular all over the world! Pioner boats are rotational moulded in Polyethylene - a strong, durable and UV stable material. The boats are moulded in one piece and can withstand roughest of treatment, extreme temperatures from the arctic cold to tropical temperatures and sunlight - everything without being damaged.  
**PIONER - Norwegian boats built for rough treatment.**

**QUALITY**  
Pioner boats are produced under the supervision of Det Norske Veritas (DNV). DNV control, test and approve all Pioner models in accordance with CE recreational craft directive (RCD) regulations. CIPAX AS is ISO-9001 and ISO-14001 accredited and with our strict internal procedures for the production combined with the knowledge of our skilled workers we secure first class quality of the Pioner boats!  
**PIONER - approved by Det Norske Veritas, an extra security for our customers!**

**ENVIRONMENTAL FRIENDLY**  
Polyethylene is an environmental friendly material and recyclable. All waste material from the production is re-used in new products as seatboxes for the boats. The production method itself is also kind to the environment with no spill to the environment.  
**PIONER - the environmental choice.**

**Strong material**  
A Pioner is moulded in Polyethylene. The manufacturing method and the properties of this material give a particularly robust and durable boat. It is possible to drive a Pioner onto a beach or, in the unlikely event of an accident into a pier.

**Minimal maintenance**  
Pioner boats need very little maintenance. This gives you the owner, more time to spend on the water and "Easy boating". If you should be unfortunate and have any damages to your Pioner, these can be fixed very easily.

**Lifelong expectancy**  
A Pioner boat will last generations. What makes this possible is a UV-stabilizer in the boat's plastic material. Thanks to this UV-protection, the boat maintains its colour and material strength. The chosen materials in the boats are extremely corrosion resistant and all of the Pioner hulls are 100% corrosion proof.

**Stability**  
All Pioners are manufactured with double hulls. This makes a Pioner very stable on the water, even if there are some waves. The design of the hull gives stability which makes it easier to move around in the boat as well as embarking/disembarking.

**Safety**  
All Pioner models are quality controlled, approved and certificated by The Norwegian Veritas (DNV) as an independent third party. This gives Pioner boat owners quality assurance and confidence to enjoy their time on water.

## FAMILY & CHILDREN

### PIONER 8 MINI

**PERFECT AS A FIRST BOAT FOR CHILDREN BUT ALSO AN IDEAL SMALL TENDER FOR SHORT TRIPS**

The Pioner 8 Mini is a boat that can be used for many things: Put it on the car roof rack and be sea-ready wherever you go; use it to get to and from another boat; tow it, or let the children learn good boating habits with this sturdy boat.

**DRIVING FACTS** (max. speed with 2 people on board)
